If $0 < b < 1$ the function represents exponential decay. When given a percentage of growth or decay, determined the growth/decay factor by adding or subtracting the percent, as a decimal, from 1. In general if r represents the growth or decay factor as a decimal then: $b = 1 - r$ Decay Factor. $b = 1 + r$ Growth Factor.

The rate of the change continues to either increase or decrease as time passes. In exponential growth, the rate of change increases over time - the rate of the growth becomes faster as time passes. In exponential decay, the rate of change decreases over time - the rate of the decay becomes slower as time passes.

Exponential Growth and Decay Exponential growth can be amazing! The idea: something always grows in relation to its current value, such as always doubling. Example: If a population of rabbits doubles every month, we would have 2, then 4, then 8, 16, 32, 64, 128, 256, etc!

Identifying Exponential Growth and Decay Determine whether each table represents an exponential growth function, an exponential decay function, or neither. a. $\begin{matrix} x & 0 & 270 & 190 & 230 & 310 \\ y & 5 & 102040 & 102040 & 102040 & 102040 \end{matrix}$ b. $\begin{matrix} x & 0 & 123 & 190 & 230 & 310 \\ y & 5 & 102040 & 102040 & 102040 & 102040 \end{matrix}$ SOLUTION a. $\begin{matrix} x & 0 & 270 & 190 & 230 & 310 \\ y & 5 & 102040 & 102040 & 102040 & 102040 \end{matrix}$ b. $\begin{matrix} x & 0 & 123 & 190 & 230 & 310 \\ y & 5 & 102040 & 102040 & 102040 & 102040 \end{matrix}$ As x increases by 1, y is multiplied by $\frac{1}{3}$. So, the table represents an exponential decay function.
