Hi, for a mat foundation (plan) found the soil bearing capacity by setting the soil parameters at slab thickness at $K_z=1\text{kn/m}^3$. Calculated the average soil reaction for strips of the mat, but not succeeding finding the shear forces and bending moments in the strips. The bending moments manually are c...

Seismic design of reinforced concrete mat foundations has advanced significantly in the last twenty years. As analytical capabilities have improved, primarily in the form of finite element analysis, the mathematical modeling of these continuous structural elements has led to seemingly more precise designs.

A mat foundation also may be used to resist hydrostatic pressures or to bridge over small, soft spots in the soil, provided the mat is adequately reinforced. Although mat foundations are more difficult and more costly to design than individual spread footings, they can be used effectively.
