Habitat The Field Guide To

Brought in from Europe as an ornamental addition to parks and estates, the Mute Swan has established itself in a feral state in some parts of North America, mainly in the northeast. In some places, it has become common enough to be unpopular, and it is considered a pest in a few areas. Not really 'mute'; its voice is hoarse and much quieter than those of our native swans, but its wingbeats may ...

Mute Swan | Audubon Field Guide

Sometimes called the 'Nonpareil,' meaning 'unrivalled,' a fair way to describe the unbelievable colors of the male Painted Bunting. This species is locally common in the Southeast, around brushy areas and woodland edges. It is often secretive, staying low in dense cover. However, males sing their bright warbling songs from higher in the trees, partly hidden among foliage or

Bryozoans are microscopic aquatic invertebrates that live in colonies. The colonies of different species take different forms, building exoskeletons (outer protective structures) similar to those of corals. Most colonies are attached to a structure such as a rock or submerged branch. Freshwater bryozoans' exoskeletons are gelatinous (like jelly) or chitinous (like the "shells" of insects ...
